

## Find out what's new in nVision 4.0

Advanced user (employee) activity monitoring;  
advanced network inventory with software legality audit;  
data leakage protection.

New features

## Advanced user activity monitoring

- Number of websites visits along with their headers and duration of sessions (a general summary of visited websites and the total time spent on particular websites)
- Detailed work time metering with breaks history: start/end times, breaks
- Process monitoring (total activity time, user work time)
- A detailed list of the programs used including start/end times along with the list of opened documents
- Work history (periodic screenshots)
- Printing monitoring: a report containing information on the date of printing, the printer used and printed documents (coming soon)
- Email monitoring: from, to, subject, size.

## Advanced network inventory

- Software license management (managing license types); License Compliance report
- An easy audit of the installed software legality; notifications only in case the number of copies exceeds the number of licenses owned
- Automatic detection of installed applications basing on an extensive template base (updated via the Internet and by users)
- Hardware audit: summary of the configuration of hardware, free disk space, the average memory usage, etc., information which enable you to define which systems should be upgraded.

## Data leakage protection (DataGuard)

- USB/other removable disks protected against copying data and running applications

## Roadmap

- Possibility to manage access rights of individual network administrators - branch network administrators will see only their sub-nets (version 4.5)
- Partial/divisional audits (useful for multi-branch companies and/or universities)
- Possibility to assign additional information to each device (serial number, value, inventory number, invoice scan, warranty scan, value etc.)
- Possibility to block running unauthorized programs (version 4.1)
